DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, 5, 6, 9, 10, 12, 13, 15, 17, 18, 19, 22, 23, 34, and 36 rejected under 35 U.S.C. 102(b) as being clearly anticipated by Nagaei et al. (Abstract of JP Patent Number 56096083).

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 7, and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagaei et al. (JP Patent Number 56096083) in view of O'Brien (US Patent Number 5817182).
- 3. Nagaei et al. teach the features previously outlined, but lack the step of forming the fluosilicic acid in situ by reacting silicon dioxide with hydrogen fluoride.
- 4. However O'Brien teaches the step of forming the fluosilicic acid in situ by reacting silicon dioxide with hydrogen fluoride (column 2 lines 47 55).

Application/Control Number: 09/591,531

Art Unit: 2825

- Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of O'Brien into the method of Nagaei et al. to provide hydrofluosilicic acid in situ. Provision for adjustability where needed involves ordinary skill in the art.
- 6. Claims 3, 4, 11, 14, 16, 20, 21, 35, 37, 42 to 48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagaei et al. (JP Patent Number 56096083) in view of Matsukawa (US Patent Number 5962145).
- 7. Nagaei et al. teach the features previously outlined, but lack the step of: the concentration of the acid being between 0.05 – 3.5M; the concentration of the additional acid being between 0.1 – 20M; the additional acid being a mineral acid having a pH of less than about 3.5 in pure water; and

immersing the substrate in bath in the range of about 10 minutes to about 72 hours.

- 3. However, Matsukawa teaches the steps of: the concentration of the acid and the additional acid (column 3 lines 37 – 65); the additional acid being a mineral acid having a pH of less than about 3.5 in pure water, and the treatment time (column 6 table 1);
- 8. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Matsukawa into the Nagaei et al. reference to etch a coating. Discovering an optimum value for a result effective

Application/Control Number: 09/591,531

Art Unit: 2825

variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

- 9. Claims 24 33, and 38 to 41 are objected to as being dependent upon a rejected claim, but would be allowable if rewritten in independent form.
- 10. Prior art considered but not used in the rejections include Lada et al. (US Patent Number 4339282), Kircher et al. (US Patent Number 6036995), and Jaworowski et al. (US Patent Number 6176999)

Remarks

11. The examiner has reviewed prior art in light of applicant's comments and finds it persuasive as to the reading of prior art. However, the examiner has discovered a new reference, which can be used as prior for rejection of some of the claims. This office action is a *Non-Final Rejection* of the claims.

Contact Information

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Igwe U. Anya whose telephone number is (703) 308-3549. The examiner can normally be reached on M - F 8:30am - 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew S. Smith can be reached on (703) 308-1323. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9318 for regular communications and (703) 872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
